Key statistics

In seasonally adjusted terms for the June quarter 2025:

- total jobs increased 0.3% to 16.3 million
- filled jobs increased 0.2% to 16.0 million
- secondary jobs decreased 1.2% to 1.0 million
- proportion of vacant jobs increased to 2.1%
- multiple job-holders decreased 1.3% to 948,900
- hours worked increased 0.3% to 6.0 billion hours.

Key statistics - Seasonally adjusted

	Jun-25	Quarterly change (%)	Annual change (%)
Jobs			
Total jobs	16,311,500	0.3%	1.6%
Filled jobs	15,971,100	0.2%	1.7%
Job vacancies	340,500	2.9%	-2.6%
Main jobs	14,922,700	0.3%	2.0%
Secondary jobs	1,048,400	-1.2%	-1.9%
Proportion of vacant jobs	2.1%	na	na
People			
Employed people	14,931,200	0.3%	2.0%
Multiple job holders	948,900	-1.3%	-0.7%
Multiple job holding rate	6.4%	na	na
Hours			
Hours actually worked	5,974.9 million	0.3%	1.6%
Payments			
Average income per employed person	\$25,018.80	0.8%	4.4%

Key statistics - Trend

	Jun-25	Quarterly change (%)	Annual change (%)
Jobs			
Total jobs	16,304,400	0.1%	1.3%
Filled jobs	15,967,400	0.1%	1.4%
Job vacancies	337,000	0.1%	-3.6%
Main jobs	14,916,500	0.3%	1.8%
Secondary jobs	1,051,000	-2.0%	-4.2%
Proportion of vacant jobs	2.1%	na	na
People			
Employed people	14,940,000	0.4%	2.0%
Multiple job holders	952,100	-1.6%	-1.8%
Multiple job holding rate	6.4%	na	na
Hours			
Hours actually worked	5,973.3 million	0.2%	1.7%
Payments			
Average income per employed person	\$25,023.40	1.1%	4.3%

Modelled state and territory industry estimates: jobs and hours worked

This release includes an article providing updated modelled state and territory level industry estimates for the Labour Account jobs and hours worked series through to March quarter 2025 (see [Modelled state and territory industry estimates: jobs and hours worked \(/articles/modelled-state-and-territory-industry-estimates-jobs-and-hours-worked\)](#)).

Factors affecting interpretation

Revisions this quarter

Data in the four quadrants of the Labour Account have been revised from the previously published estimates.

Revisions may be attributable to a range of factors, these include:

- revisions to Net Overseas Migration data
- revisions to data from the quarterly Australian National Accounts

Further information on revisions in the Labour Account can be found in [Labour Statistics: Concepts, Sources and Methods \(/statistics/detailed-methodology-information/concepts-sources-methods/labour-statistics-concepts-sources-and-methods/2023/methods-four-pillars-labour-statistics/australian-labour-account#revisions-in-the-australian-labour-account\)](#).

Revisions to published estimates are shown in Table 22 in the Data downloads section.

The latest industry benchmark data in the Labour Account is for the 2022-23 financial year. Estimates from September quarter 2023 onwards are subject to revisions as indicator data is progressively replaced with more definitive benchmark information.

Stock and flow estimates

The Labour Account includes a combination of stock and flow time series estimates. A stock series is a measure of certain attributes at a point in time. A flow series is a measure of activity over a given period.

The Jobs and People quadrants contain stock time series estimates measuring change from the end of the proceeding quarter to the end of the current quarter. The Hours and Payments quadrants include flow time series estimates and measure all activity across the reference quarter.

For more information, please see [Time series data \(/statistics/understanding-statistics/statistical-terms-and-concepts/time-series-data\)](#).

Guide to labour statistics

The Labour Account is the best source of quarterly industry and sector data. To learn more about our different labour measures, their purpose and how to use them, see our [Guide to labour statistics \(/statistics/understanding-statistics/guide-labour-statistics#data-impacts-and-changes\)](#). It provides summary information on labour market topics including [Industry employment guide \(/statistics/understanding-statistics/guide-labour-statistics/industry-employment-guide#data-impacts-and-changes\)](#) data.

Seasonal adjustment

Easter Monday and ANZAC day occurred 3 days apart in the same week in 2025. These holidays are in close proximity infrequently with previous occurrences in 2019, 2014, 2011 and 2003. It will occur again in 2030 and 2041. This close proximity may have impacted economic aggregates such as hours worked. No additional seasonal adjustments have been made.

Jobs

In seasonally adjusted terms for the June quarter 2025:

- filled jobs increased by 0.2%, following a 0.1% rise in the March quarter 2025. Filled jobs grew by 1.7% through the year
- the number of main jobs increased by 47,600 (or 0.3%)
- the proportion of vacant jobs increased to 2.1%
- the number of public sector jobs increased by 0.3%, while the number of private sector jobs increased by 0.2%.

Total jobs

In seasonally adjusted terms for the June quarter 2025, the total number of jobs increased by 44,900 (or 0.3%). This consisted of a increase of 9,600 job vacancies and a increase of 35,300 filled jobs.

Total jobs, by industry, seasonally adjusted

Filled jobs

In seasonally adjusted terms for the June quarter 2025, the number of filled jobs increased by 35,300 to 16.0 million.

Filled jobs, seasonally adjusted and trend (a)

a. Larger than usual quarter-to-quarter changes occurred during the COVID-19 pandemic. The ABS recommends caution when using trend estimates published in spreadsheets in this release for this period.

Filled jobs, by industry, June quarter 2025, seasonally adjusted

	Filled jobs ('000)	Quarterly change (%)	Annual change (%)
Agriculture, forestry and fishing (A)	460.5	-0.7	-0.4
Mining (B)	225.8	0.1	-2.1
Manufacturing (C)	906.1	-1.0	-0.6
Electricity, gas, water and waste services (D)	140.7	-0.8	4.0
Construction (E)	1,256.1	0.4	1.8
Wholesale trade (F)	556.1	-0.5	-1.9
Retail trade (G)	1,509.0	-0.4	-1.0
Accommodation and food services (H)	1,169.7	1.8	3.7
Transport, postal and warehousing (I)	718.1	1.1	3.9
Information media and telecommunications (J)	206.8	0.7	0.8
Financial and insurance services (K)	521.3	0.5	2.6
Rental, hiring and real estate services (L)	287.1	-1.0	-0.4
Professional, scientific and technical services (M)	1,323.5	0.4	2.6
Administrative and support services (N)	1,066.6	0.0	-2.0
Public administration and safety (O)	877.8	0.1	1.6
Education and training (P)	1,276.5	0.5	3.5
Health care and social assistance (Q)	2,632.5	0.3	4.4
Arts and recreation services (R)	267.5	1.2	-0.2
Other services (S)	569.3	0.0	3.2
Total all industries	15,971.1	0.2	1.7

Main and secondary jobs

In seasonally adjusted terms for the June quarter 2025:

- main jobs increased by 47,600 (or 0.3%)
- secondary jobs decreased by 12,200 (or 1.2%)
- the proportion of secondary jobs to filled jobs decreased to 6.6%.

The three industries with the highest number of secondary jobs were Health care and social assistance, Administrative and support services, and Education and training.

Main and secondary jobs, by industry, seasonally adjusted

Secondary jobs can be held by people who have their main job in the same or a different industry.

Statistical discrepancy - Filled jobs

The Labour Account compiles independent estimates of the number of filled jobs from both a household and business perspective. The difference between these two estimates is referred to as the "statistical discrepancy". The household estimates of filled jobs are considered the best measure of labour market activity at the total economy level, while business sources are considered more reliable estimating the distribution of jobs across industries. As a result, the Labour Account filled jobs estimates are constrained (equivalent) to the household side.

The discrepancy between the two sources is reduced to zero through the balancing processes of the Labour Account, producing a single harmonised or "balanced" number of filled jobs. The balanced estimate of filled jobs incorporates the advantage of the industry distribution derived from business side data, whilst constraining to a total economy estimate sourced from household side data. In original terms the discrepancy between household sources and business sources was 415,300 jobs in the June quarter 2025, or 2.6% of the household estimate.

Filled jobs discrepancy, original

Balancing decisions for Rental, hiring and real estate services and Other services were mostly based on household survey sources. All other industries were mostly based on business survey sources.

People

In seasonally adjusted terms for the June quarter 2025:

- the total number of employed people increased by 0.3% to 14.9 million
- the number of multiple job holders decreased by 1.3%
- unemployed people increased by 41,900 people to 653,800.

Employed people and multiple job-holders, seasonally adjusted and trend (a)

a. Larger than usual quarter-to-quarter changes occurred during the COVID-19 pandemic. The ABS recommends caution when using trend estimates published in spreadsheets in this release for this period.

The three industries with the highest number of employed people in the June quarter 2025 were Health care and social assistance, Retail trade, and Professional, scientific and technical services.

Employed people, by industry, seasonally adjusted

Hours

In seasonally adjusted terms for the June quarter 2025, the total number of hours actually worked increased by 16.6 million hours (or 0.3%) to 6.0 billion hours.

Hours actually worked, seasonally adjusted and trend (a)

a. Larger than usual quarter-to-quarter changes occurred during the COVID-19 pandemic. The ABS recommends caution when using trend estimates published in spreadsheets in this release for this period.

The three industries with the highest number of hours actually worked in the June quarter 2025 were Health care and social assistance, Construction, and Professional, scientific and technical services.

Hours actually worked, by industry, seasonally adjusted

Quarterly hours worked per job, by industry, seasonally adjusted

Payments

The Labour Account Payments quadrant presents the costs incurred by enterprises in employing labour, and the income received by people from its provision. Total income consists of compensation of employees and labour income from self-employment. The addition of other related costs to employers to total income will derive total labour costs.

In seasonally adjusted terms for the June quarter 2025:

- total labour income increased by \$4,050 million (or 1.1%) to \$373,560 million
- the average labour income per employed person increased by 0.8% to \$25,019
- total compensation of employees increased by 1.2% to \$343,814 million
- labour income from self-employment decreased by 0.3% to \$29,746 million
- total labour costs increased by \$4,316 million (or 1.1%) to \$397,540 million.

Total labour income, seasonally adjusted and trend (a)

a. Larger than usual quarter-to-quarter changes occurred during the COVID-19 pandemic. The ABS recommends caution when using trend estimates published in spreadsheets in this release for this period.

The three industries with the highest total labour income in the June quarter 2025 were Health care and social assistance, Professional, scientific and technical services, and Construction.

Total labour income, by industry, seasonally adjusted
